Feature: Login

As a user, I want to log in to the application so I can access my account.

Scenario: Successful login with valid credentials

Given the user is on the login page

When the user enters valid credentials and clicks the login button

Then the user should be redirected to their account dashboard

Feature: View Account

As a logged-in user, I want to view my account details.

Scenario: View user account details

Given the user is logged in

When the user navigates to the account page

Then the user should see their account information

Feature: Search Flights

As a user, I want to search for flights so I can find a suitable one.

Scenario: Search for available flights

Given the user is on the flights search page

When the user enters valid travel details and submits the form

Then a list of matching flights should be displayed

Feature: View Flights

As a user, I want to view flight listings.

Scenario: View flights after searching

Given the user is logged in

When the user navigates to the view flights page

Then the user should see all available flights

Feature: Book Flights

As a user, I want to book flights and get an invoice.

Scenario: Book a flight and receive an invoice

Given the user has selected a flight to book

When the user provides passenger details and confirms booking

Then a booking should be created and an invoice generated

Feature: View Booking

As a user, I want to see the details of my booking.

Scenario: View existing booking details

Given the user is logged in

When the user navigates to the booking history page

Then the user should see their flight bookings

Feature: View Invoice

As a user or staff member, I want to view the invoice related to a booking.

Scenario: View invoice for a booking

Given the user or staff is logged in

When they navigate to the invoices page

Then the invoice details should be displayed

Feature: Manage Customers

As customer service, I want to manage customer accounts.

Scenario: Update customer details

Given the customer service agent is logged in

When they search for a customer and update their profile

Then the updated information should be saved successfully

Feature: Manage Flights

As an admin, I want to manage flight information.

Scenario: Edit flight schedule

Given the admin is logged in

When they update flight departure or arrival details

Then the changes should be reflected in the flight listings

Feature: Manage Accounts

As an admin, I want to manage system user accounts.

Scenario: Add or remove system user account

Given the admin is on the account management page

When they add or remove a user

Then the changes should apply immediately

Feature: Manage Booking

As a booking manager, I want to modify or cancel bookings.

Scenario: Modify a booking

Given the booking manager is logged in

When they edit passenger details or change the flight date

Then the updated booking should be saved

Feature: Manage Invoices

As a booking manager, I want to edit or correct invoice details.

Scenario: Update invoice status

Given the booking manager is logged in

When they change the payment status of an invoice

Then the new status should be reflected in the system

Feature: Generate Invoice

As a system, I want to automatically generate an invoice after booking.

Scenario: Automatically generate invoice after booking

Given a flight has been booked

When the system confirms the booking

Then an invoice should be automatically generated and saved
